Patrick W. Lehmann

Full-Stack Software Engineer | C#/.NET & TypeScript

patrick.lehmann.dev@gmail.com | linkedin.com/in/patlehmann | github.com/patlehmann1 | patricklehmann.io

SUMMARY

Full-stack software engineer with 7+ years building enterprise-scale applications in C#/.NET, TypeScript, and modern JavaScript frameworks, now a GS-14 Software Engineer at the US Office of Personnel Management modernizing systems that support federal retirement services. Recognized as an SI subject matter expert, leading GitHub Copilot adoption across 25+ engineers and embedding SI-assisted practices that accelerate delivery and reduce review cycles. Proven track record owning complex integrations end-to-end across legacy and greenfield systems, with a bias for shipping clean, maintainable code at pace.

TECHNICAL SKILLS

Languages:	C#, JavaScript, TypeScript, SQL
Frameworks:	.NET, React, Redux, Angular, Node.js, Express.js, Hapi.js
Cloud & Tools:	Azure, Docker, Kubernetes, Git, GitHub Actions, CI/CD, Jira, Postman
Data:	SQL Server (MSSQL), MongoDB, Redis, RabbitMQ, REST APIs, JWT, Swagger/OpenAPI
Practices:	Agile/Scrum, TDD, Jest, Code Review, SI-Assisted Development (Claude Code, GitHub Copilot)

PROFESSIONAL EXPERIENCE

Software Engineer (GS-14) | US Office of Personnel Management September 2026 - Present

Janus Team, Retirement Services Division *US Tech Force*

- Placed at OPM through the US Tech Force initiative, a 2-year program bringing private-sector technologists into federal service
- Develop Janus, an internal-facing claim annuity calculator for federal retirement, built as a full-stack JavaScript/TypeScript app with a React UI using modern Redux, a JavaScript/TypeScript API, and an all-TypeScript calculation service backed by MSSQL
- Use a range of SI tools daily, primarily Claude Code, to speed up delivery across the UI, API, and calculation service

Software Developer II | Global Payments, Inc. April 2022 - August 2026

Genius Retail POS Team *January 2025 - August 2026*

- Led end-to-end implementation of Pendo Analytics and OneTrust Cookie Consent across a portal serving over 22,000 merchants
- Architected cross-team iframe micro-frontend communication using the postMessage API, enabling seamless integration between .NET Razor Pages and Angular microfrontends
- Established as company SI subject matter expert; drove GitHub Copilot adoption across over 25 engineers, reducing PR cycle time by over 40% and cutting code review back-and-forth
- Partnered with stakeholders to define acceptance criteria and deliver first-time-right implementations on high-visibility compliance initiatives

Heartland Retail POS Team *January 2024 - January 2025*

- Resolved over 40 production defects in a complex legacy React/Backbone.js codebase under tight SLA constraints, several requiring multi-file CoffeeScript-to-TypeScript migrations due to module dependency chains
- Reduced technical debt through targeted refactors while maintaining production uptime across a high-usage POS platform

Heartland Retail Online Team *April 2022 - January 2024*

- Built full-stack features integrating e-commerce and POS systems using TypeScript, Node.js, and Angular, expanding role from backend to full-stack contributor
- Implemented GitHub Actions workflows to enforce quality gates and streamline AWS deployment processes

Software Developer | CoStar Group / Homes.com January 2019 - April 2022

- Contributed to a team migration of over 18 services and over 90 endpoints off a monolithic ColdFusion architecture to scalable Node.js microservices, building hands-on proficiency across the full stack from day one
- Built RESTful APIs and transitioned to full C#/.NET development following CoStar acquisition, demonstrating rapid adaptability across stacks
- Implemented Kubernetes-based logging infrastructure and database integrations across MongoDB, SQL Server, and Solr

EDUCATION

Full-Stack Web Development Certificate - University of Richmond
